

# Location in Context

Derek McAuley

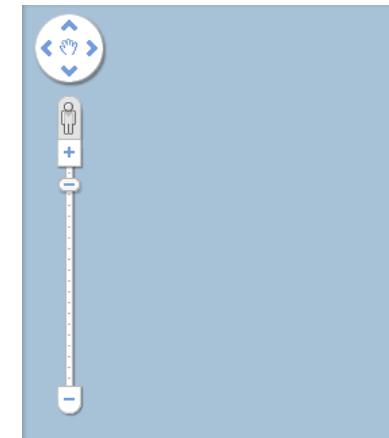

# What I did on my holidays

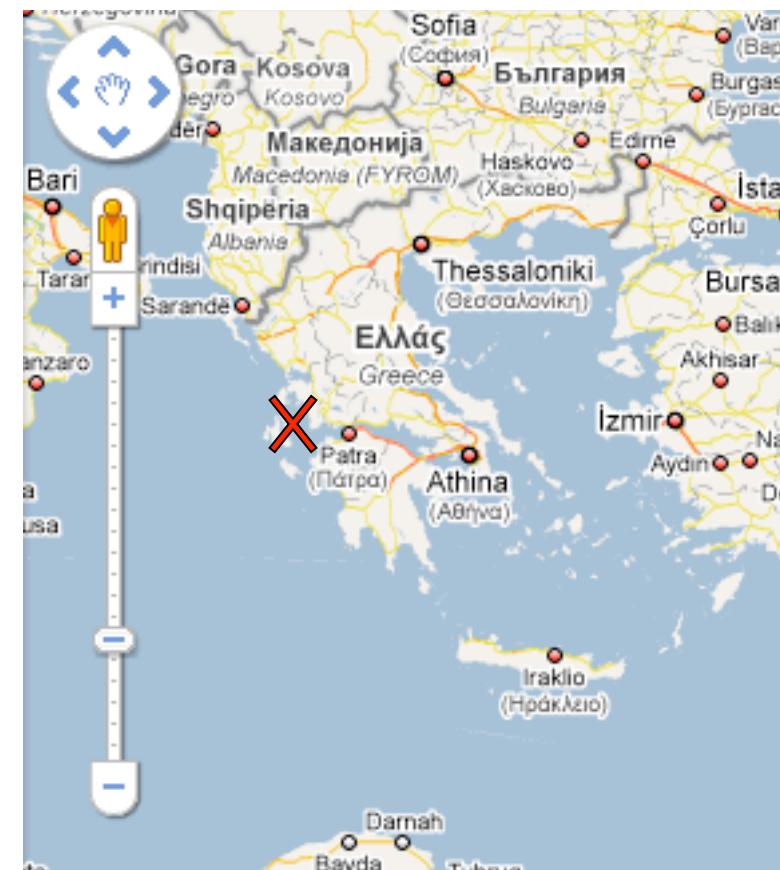

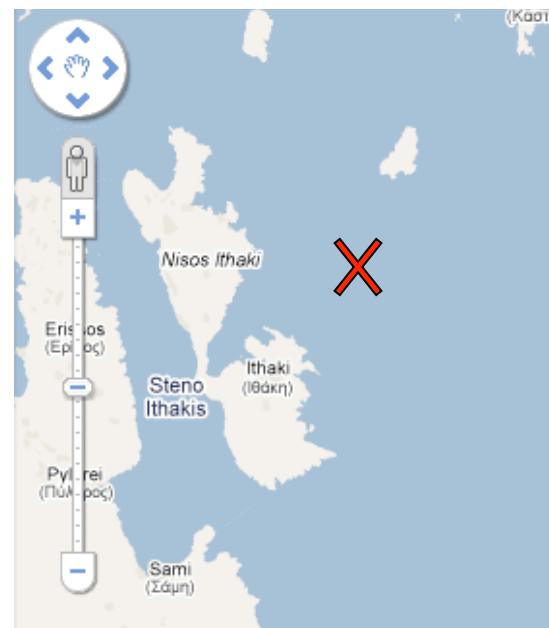

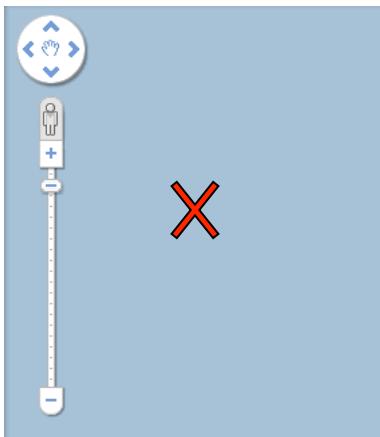

- Two weeks ago I took two compass bearings applied the local  $3^{\circ}5'E$  variation, referred to a map and found I was at:

$38^{\circ} 25.8' N, 20^{\circ} 47.3' E$   
(was within .1' of the GPS!)

- Google maps returns
- What location based service might I want?

# I knew where I was...

# Scenario 1; “Help!”

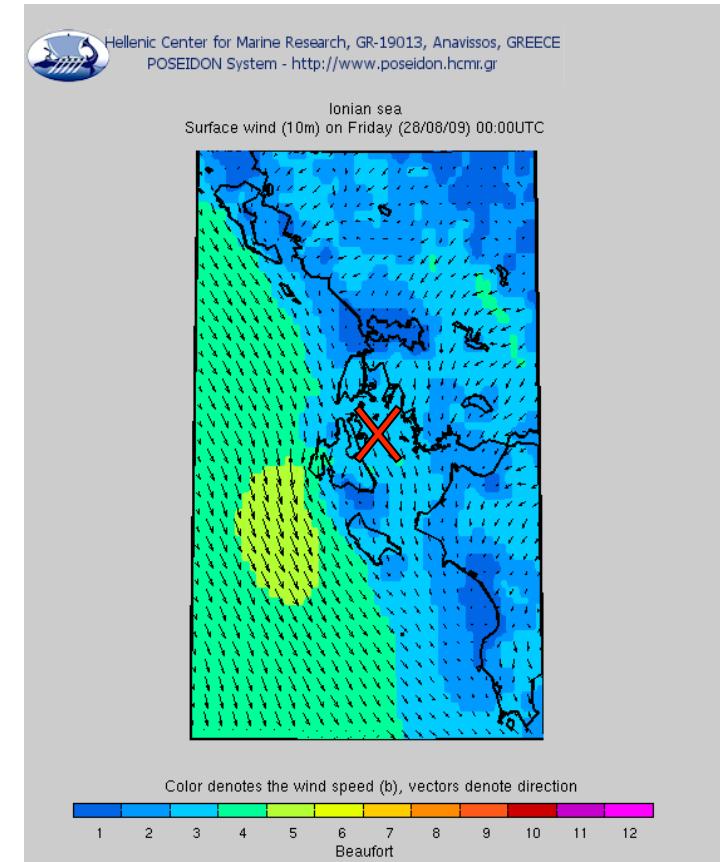

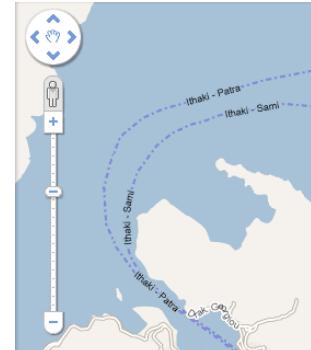

- I really need someone else to know where I am

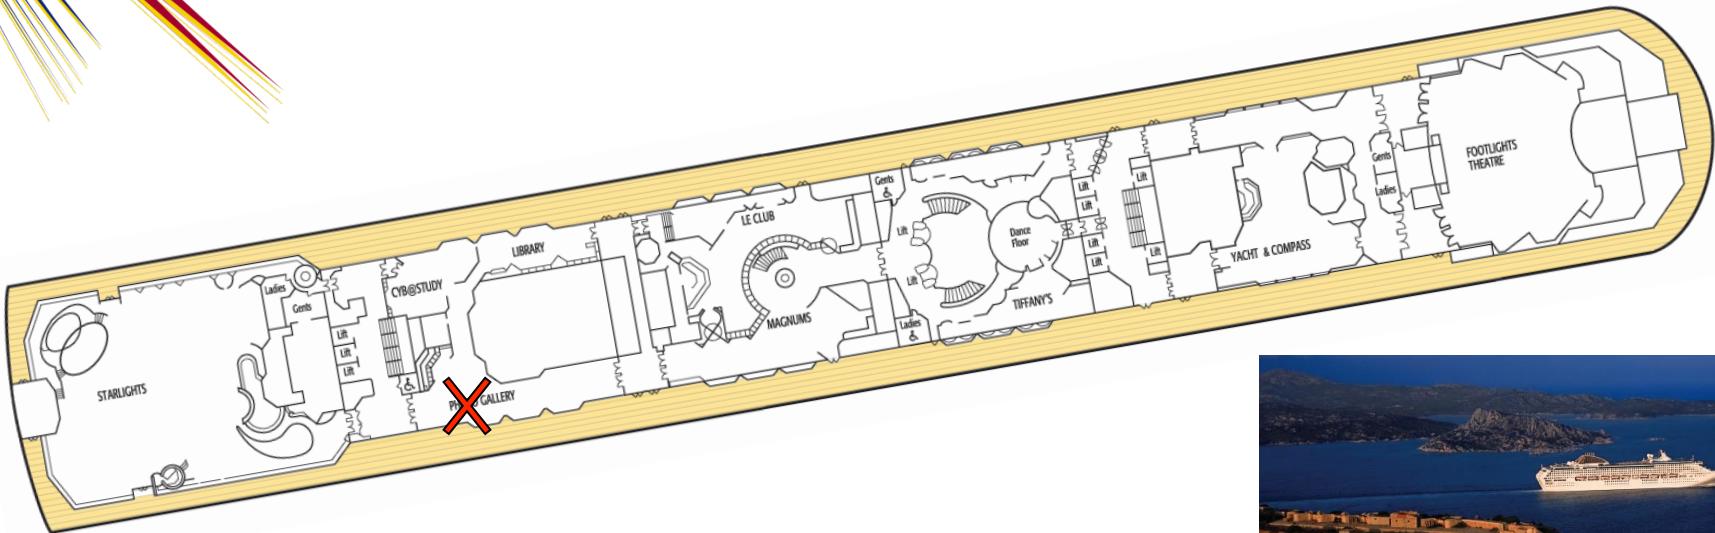

# Scenario 2: “Navigator”

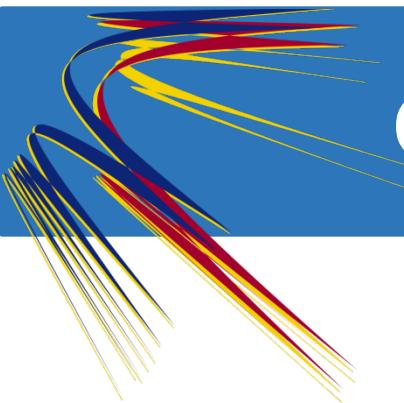

- With a North Westerly at Force 3 I can beam reach to Vathi harbour on Ithaca making about 6 knots
  - ETA about an hour
  - Crew can read books until harbour duties
  - 'ware Greeks driving ferries

# Scenario 3: “The bar moved”

- Where's the nearest bar?  
...sometimes we really want relative location

# Context

- The three examples so far give different physical contexts in which applications might operate
- We also want to understand applications that consider the social context... to understand this we must look into:
  - The transient and temporal nature of social context
  - The acceptable level of information sharing in different social groups
  - Ownership and “licensing” of use

# Scenario 4: “Day in the park”

- Social context is for “a day” and includes sharing information between a family and/or friends and the park...
- Services:
  - Where are the kids?
  - I’m lost please return me to my parents
  - Where are my buddies?
  - Where are the short queues?
- Who retains what rights to the data at the end of the day?

# Scenario 5: “Attendees”

From: NottIS (Derek McAuley)

Invite: J.Bond@mi6.gov.uk O.BinLaden@alqueda.org

Subject: Drinks reception

Location: Room A, Universal Imports, London

Start: Fri, 25 Dec 2009 09:00 All-day event

End: Fri, 25 Dec 2009 10:00

Show all day

25 December 2009  
9<sup>00</sup> 10<sup>00</sup> 11<sup>00</sup> 12<sup>00</sup> 13<sup>00</sup>

All Attendees

25 December 2009

08:53 live location

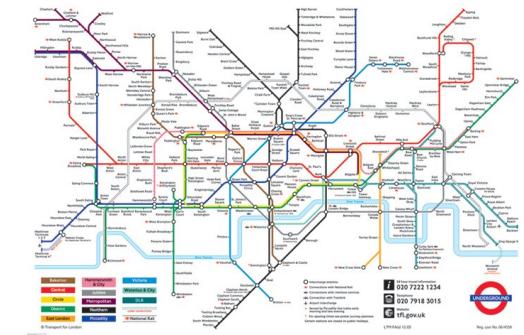

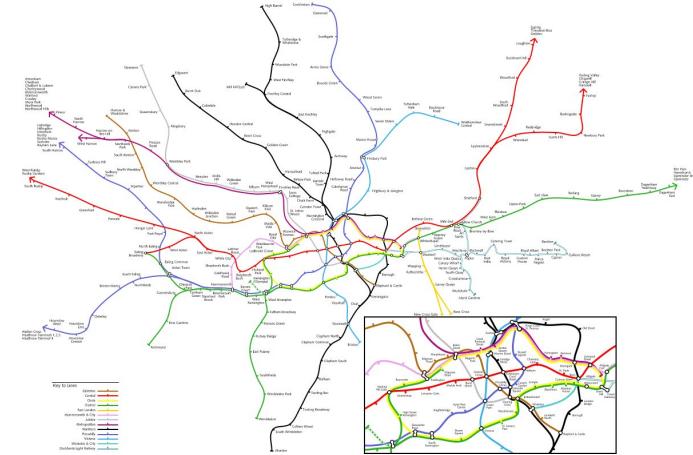

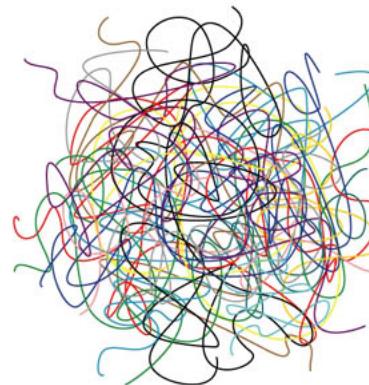

Googlezon

All attendees	Location	Attending
D McAuley	Room A	Present
J Bond	Universal Imports	On his way
O BinLaden	Afghanistan	Not coming

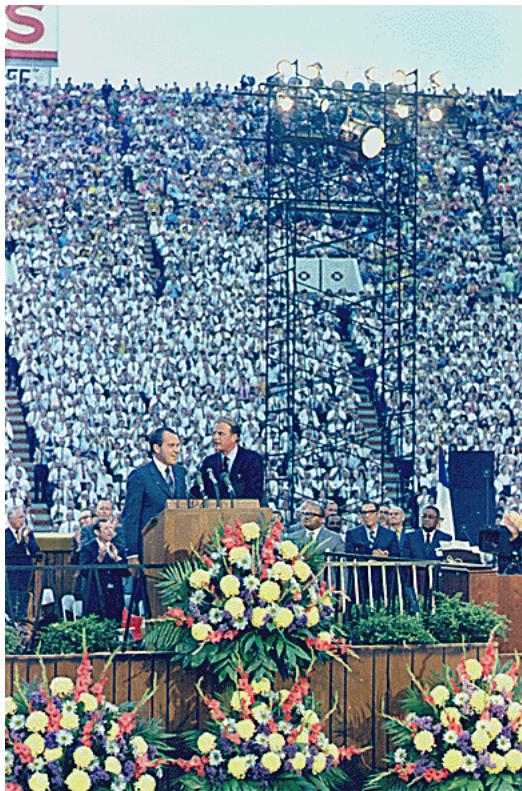

# Space and place

- Keeping it simple 😊
  - Space – the geographic and mathematical representation
  - Place – the social context and human model

(Of course the argument that geography and maths are themselves human constructs leads to a deeper discussion...)

## Scenario 6: “Worship”

- A space can be a different place at different times

# Spaces overlap

- In ubiquitous computing we start to consider other “spaces”
- These spaces do not have simple Euclidean distance metrics...

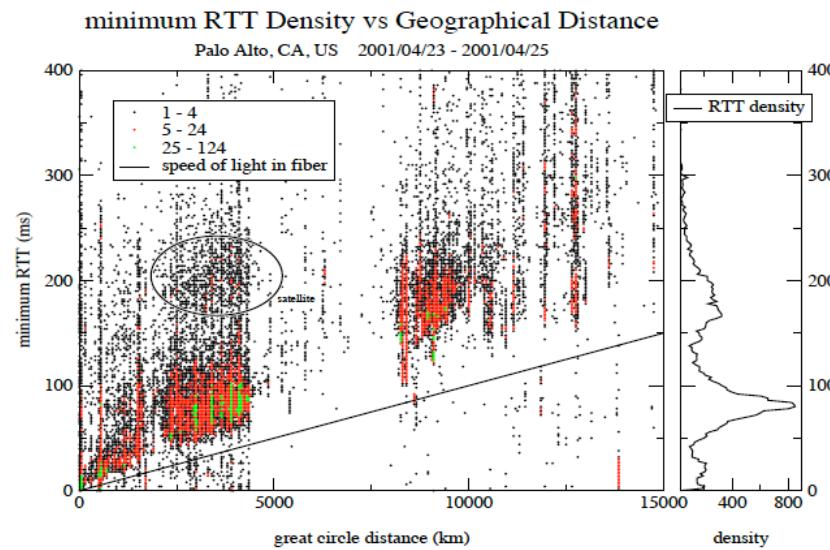

Fig. 3. Minimum RTT density vs geographic distance for CAIDA topology monitor in Palo Alto, CA, USA. 25 April 2001.

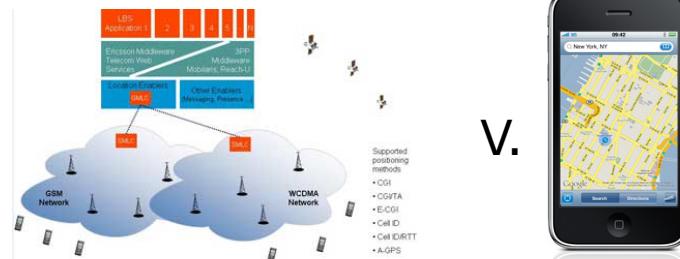

# Who's data is it anyway?

## It's ours

Why we, not government, must own our data

LIAM MAXWELL

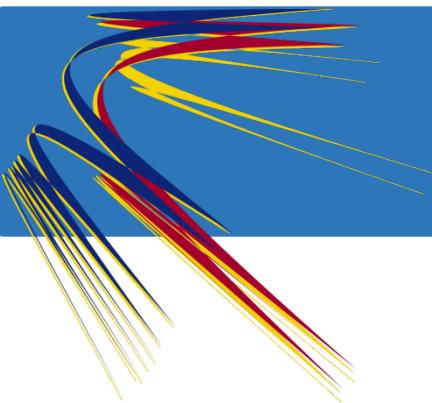

“It’s ours”

- Liam Maxwell, Centre for Policy Studies

“Google stores your information securely and privately, but you always control how it's used.” - Google

“Can Spam” and “EU Data Retention Directive” – it is ours!

"Enclosed and humanized space is place;  
Compared to space, place is a calm center  
of established values. Human beings  
require both space and place." - Tuan

Successful location based services will address  
these human issues....
